**MICHIGAN IT COMPANY EARNS PATENT FOR SOFTWARE THAT TACKLES
LANGUAGE BARRIERS IN HEALTHCARE**

ANN ARBOR, MI March 22, 2016 The Eloquence Communications team is thrilled to announce that the US Patent & Trademark Office recently issued a Notice of Allowance in Application entitled “Method and System for Advanced Patient Communication”.

The application is a continuation-in-part of U.S. Patent No. 8,183,987, also assigned to Eloquence Communications and has thirty-three allowed claims drawn to computer-implemented methods, computer-readable mediums, and patient communications processors that: (i) receive and process a first message from a patient communication device at a central processing server, the first message representing a patient request associated with the patient communication device; (ii) generate one or more additional messages in response to the first message, each including an action item associated with the patient request and a lapse in time since receiving the first message; and (iii) transmit the additional messages to specific health care provider devices.

CEO, Dr. Lance Patak explains the significance of this allowance, stating, "Our patent portfolio recently expanded to cover a vast number of strategic international territories that are key to developing new international partnerships; and, this Notice of Allowance locks in opportunities that will be further supported by two divisional applications. The timing is impeccable."

About Eloquence Communications

Eloquence Communications is a healthcare IT company founded by Dr. Lance Patak and Dr. Bryan Traughber, two practicing physicians dedicated to improving the delivery of care through the development of innovative and simple communication solutions. Eloquence implements evidence-based healthcare IT solutions that deliver greater specificity, precision, transparency, and language access.
